PROFESSIONAL SUMMARY

Java Developer with **5+ years** of experience in backend development, enterprise application development, system integration, and production support. Strong expertise in Java, Spring Boot, Microservices, REST/SOAP APIs, SQL, and Oracle, with experience in event-driven architecture using Kafka and cloud-based technologies. Experienced in developing and maintaining scalable applications, integrating enterprise systems, troubleshooting production issues, modernizing applications from Java 8 to Java 21, vulnerability remediation, and implementing CI/CD pipelines. Skilled in working across the complete application lifecycle, from development and integration to deployment, monitoring, and support.

TECHNICAL SKILLS

Languages: Java, SQL

Frameworks: Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, JUnit

Web Services: SOAP APIs, REST APIs

Architecture: Microservices, Event-Driven Architecture

Messaging: Apache/Confluent Kafka

Databases: Oracle, PostgreSQL

Containers/Deployment: Docker, Kubernetes

CI/CD: GitHub Actions, Azure DevOps

Build Tools: Gradle, Maven

Tools: Postman, STS, IntelliJ, VS Code, DBeaver, GitHub Desktop, Cronicle Redwood, BMC Remedy, ServiceNow, Datadog

Source Control: Git, GitHub, Azure Repo

Scripting: Bash

PROFESSIONAL EXPERIENCE

I.T. Analyst | Tata Consultancy Services | April 2026 – Present

ExxonMobil

Enterprise data integration platform that acts as an intermediary between upstream systems such as SAP and third-party systems and downstream business applications. The platform uses event-driven microservices and Kafka to ingest, transform, normalize and distribute business data.

- Developing and supporting Java 17 and Spring Boot 3 microservices for data processing, transformation, validation and routing.
- Working with Confluent Kafka for asynchronous communication and event-driven data flows.
- Working with PostgreSQL, Azure Cosmos DB and Azure Blob Storage for persistence and storage requirements.
- Supporting containerized deployments using Docker, Kubernetes and Azure Container Registry.
- Working with GitHub Actions for CI/CD and Datadog for logs, metrics, tracing and application monitoring.

Canadian Imperial Bank of Commerce (CIBC)

- Provided backend production support for a mortgage processing application built with Spring Boot, REST APIs and SQL.
- Resolved production incidents and backend defects, troubleshoot REST APIs, database issues and upstream/downstream integrations.
- Analyzed application logs and supported Azure DevOps deployments while working within SLA requirements.

Technology Analyst | Infosys Limited | November 2021 – April 2026

Uniper Energy

- Worked on vulnerability remediation for a Java 8-based shared library used by multiple upstream and downstream applications.
- Upgraded vulnerable dependencies, applied secure coding practices and maintained backward compatibility.
- Managed builds and deployments through Azure DevOps CI/CD pipelines and collaborated with dependent application teams for release validation.

Java 8 to Java 21 Migration

- Migrated enterprise applications from Java 8 to Java 21 by resolving dependency and compatibility issues and updating Maven configurations.
- Replaced deprecated APIs, validated application compatibility and supported performance optimization during modernization.

Southern California Edison (SCE)

- Developed and maintained enterprise applications using Java, Spring Boot, Hibernate and JPA.
- Designed and integrated SOAP APIs for inter-service communication and developed Oracle PL/SQL procedures, functions and packages.
- Supported application maintenance, troubleshooting and integration activities across enterprise systems.
